

# Lazy Google Tap

## **Before you begin:**

All *blue* words are explained in more detail in the notes.

All *red* words are commands you need to do.

All *green* words are files you will be working with.

Please read the notes before you ask questions on the forums. Many of your questions should be answered there.

## **Description:**

What is Lazy Google Tap?

Lazy Google Tap changes the links on your website from php to html. For example  
`http://www.yoursite.com/modules.php?name=Forums` would become  
`http://www.yoursite.com/Evo-Forums.html`.

## **Why?:**

This allows search engine bots to better crawl your site. This will allow more of your content to be searchable and should give you a higher ranking in certain search engines.

## **How Do I Set It Up?:**

First make sure you have an `.htaccess` file on the root of your site.

If you don't you can simply make one, or rename the `evo.htaccess` file to `.htaccess`.

If you created a blank one or your `.htaccess` file does not contain the following RewriteEngine statements please insert it.

If you have rename the `evo.htaccess` file or you have these statements then skip the next page.

## RewriteEngine on

```
RewriteRule ^Evo-(.*)_(.*)_-(.*)_-.(*)_-.(*)_-.(*)_-.(*)_-.(*)_-.(.*).html$
```

```
/modules.php?name=$1&$2=$3&$4=$5&$6=$7&$8=$9&$10=$11&$12=$13&$14=$15
```

[L]

```
RewriteRule ^Evo-(.*)_-(.*)_-(.*)_-(.*)_-(.*)_-(.*)_-(.*)_-(.*)_-(.*)_-(.*)_-(.*)_-(.*)_-(.*)\$.html$
/modules.php?name=$1&$2=$3&$4=$5&$6=$7&$8=$9&$10=$11&$12=$13 [L]
```

```
RewriteRule ^Evo-(.*)_(.*)_(.*)_(.*)_(.*)_(.*)_(.*)_(.*)_(.*)_(.*)_(.*)_(.*)_.html$ /modules.php?name=$1&$2=$3&$4=$5&$6=$7&$8=$9&$10=$11 [L]
```

```
RewriteRule ^Evo-(.*)_(.*)_(.*)_(.*)_(.*)_(.*)_(.*)_(.*)_(.*)_(.*)\..html$
/modules.php?name=$1&$2=$3&$4=$5&$6=$7&$8=$9 [L]
```

```
RewriteRule ^Evo-(.*)_(.*)_(.*)_(.*)_(.*)_(.*)_(.*)_(.*)\..html$
/modules.php?name=$1&$2=$3&$4=$5&$6=$7 [L]
```

```
RewriteRule ^Evo-(.*)_(.*)_(.*)_(.*)_(.*)\.html$
/modules.php?name=$1&$2=$3&$4=$5 [L]
```

```
RewriteRule ^Evo-(.*)_(.*)_(.*)\.html$ /modules.php?name=$1&$2=$3 [L]
```

RewriteRule ^Evo-index.html\$ /index.php [L]

```
RewriteRule ^Evo-(.*)\.html$ /modules.php?name=$1 [L]
```

If you would like to use a prefix other then “Evo-“ for your page titles then you need to make a few changes.

Open `includes/functions_tap.php`

Find:

`define('TAP_PREFIX', 'Evo-');`

Replace:

Evo-

With what ever you want your prefix to be. For example “MySite-”:

`define('TAP_PREFIX', ' MySite-');`

Save, Close (and Upload)

Open `.htaccess`

Find ALL:

Evo-

Replace:

Your new prefix

Example:

<pre>RewriteRule ^ MySite- (.*)\.html#(.*)\$ /modules.php?name=\$1#\$2 [L] RewriteRule ^ MySite- (.*)\.html\$ /modules.php?name=\$1 [L]</pre>
---

Save, Close (and Upload)

Finally go into the Admin [Nuke-Evo]->Preferences->General Site Info

<http://www.yoursite.com/admin.php?op=Configure&sub=1>

Now choose how you want the Lazy Google Tap to work.

Disabled – Lazy Google Tap is completely off

Bots Only – Only when Evo detects the user is a bot (ie Google, MSN, etc) will it activate the Lazy Google Tap

Everyone – All users, administrators and bots will see the Lazy Google Tap

Bots & Admins – Only bots and administrators will see the Lazy Google Tap

Hit the submit button.
