Problem - Errors

1. PNG images not getting displayed:

We have implemented an Internet Explorer PNG image fix which allows the browser to properly display PNG images. Since this fix is enabled via javascript, you have to turn on 'Active Scripting' (enabled per default) in your browser so it can execute the javascript.

Problem:

PNG images do not get displayed on the website (browser) due to the fact that the browser has not enabled `Active Scripting`. They appear while the page still loads but disappear when the page is fully loaded.

Solution:

1. In Microsoft Internet Explorer 5.x or later, click on `Internet Options` from the `Tools` menu.
2. From the `Security` tab, click `Custom Level`
3. Now click on `Custom Level...` while the `Internet` icon is highlighted above (highlighted per default)
4. Scroll down to the section `Scripting` and enable `Active scripting`. We also recommend that you set `Java permissions` to `High safety`
5. Now apply the changes by clicking `OK` (2 times)
6. Close all browser windows and relaunch the browser and the settings should be enabled
