Problem - Errors

Users cannot change their names:

The problem is caused by the fact that the profile is controlled by phpbb and thus the settings must change from the default to allow this to happen.

Problem:

Users cannot change their name after their account has been created. When they hit submit it says the profile has been updated but no changes have been made.

Solution:

Go to Admin [Forums] -> General Admin -> Configuration. Then under the General Board Settings you must change Allow Username changes to Yes (This is the last choice in the group).
