Making Modules Complaint to Nuke Patched 3.1

Description:

To make custom modules fully compatible with Nuke Patched 3.1 and Nuke-Evolution, you should do the following changes to your module files.

Note: The module should be already compatible with PHP-Nuke 7.5 and above due to the new Administration System. You can find a file called 'Making Modules Complaint to PHP-Nuke 7.5 Administration System.pdf' within the same folder where you have found this file:

OPEN modules/ALL_MODULES/*.php:

Note: The actual code might vary depending on the author but the below should give you a clear idea.

FIND:

```
if (!eregi("modules.php", $_SERVER["PHP_SELF"])) {
    die("You can't access this file directly...");
}
```

REPLACE, WITH:

```
if (!defined('MODULE_FILE')) {
    die ("You can't access this file directly...");
}
```

OPEN modules/ALL_MODULES/index.php:

Note: It's possible that you will find the below changes not only in the index.php file. Check the other files as well to be sure you change all of them.

FIND:

```
$index = 1;
```

OR:

```
$index=1;
```

OR:

```
$index =1;
```

REPLACE, WITH:

```
define('INDEX_FILE', true);
```

FIND:

```
if ($module == 1) {
```

REPLACE, WITH:

```
if (defined('MODULE_FILE')) {
```

FIND:

```
if ($header == 1) {
```

REPLACE, WITH:

```
if (defined('NUKE_HEADER')) {
```

FIND:

```
if ($footer == 1) {
```

REPLACE, WITH:

```
if (defined('NUKE_FOOTER')) {
```

OPEN modules/ALL_MODULES/admin/*.php:

FIND:

```
if (!eregi("admin.php", $_SERVER['PHP_SELF'])) { die ("Access Denied");
}
```

REPLACE, WITH:

```
if (!defined('ADMIN_FILE')) {
    die ("Access Denied");
}
```
